## Challenge Us! 2021

**Brief description of the problem and / or project (max 20 lines)**

Indicate the problem that you intend to solve with the use of big data, and its relevance in the company's business and the national / international market. What types of data, which users are involved, which application scenarios, etc.

ABC company has its customers across the globe and is recorded in millions. We often receive complains regarding food products. We are involved in a new setup where we would like to respond to complaints of our customers in real time. We already have a millions of complaints in our database in a textual format. The idea is to use advance artificial intelligent (AI) algorithms to learn from existing customers complain, and the solutions which were proposed. Learning from such a large set of textual data, which is of 100GB is a challenging task. The new AI based system will handle complaints by itself and will provide solutions automatically.

**Section 2.**

**Description of the social / industrial / economic impact of the project (max 20 lines):**

Indicate the impact that the proposed solution may have on: (i) the proposing company and its national and / or international market; (ii) prospects of relapse for the regional / national economic system of the proposed technologies; (iii) degree of innovation.

The project will be of great benefit to:

- 1) the company as we will be able to solve the issues related to delay
- 2) the customers as the project aims to lower the latency time considerably.

To summarize, the project will have economic and social impact.

**Section 3.**

**Type of support requested from SoBigData.eu (max 10 lines)**

Indicate and discuss at least one of the following scenarios: (i) data is available, and you want to study their potential in the reference business context; (ii) a problem has been identified and you have data for it, and you want to solve it with the help of the SoBigData++ researchers; (iii) same as (ii) above but the solution is known and you need the tools available on the SoBigData++ platform.

We have some data, which we are not able to analyse for the business. In addition, we would also like to extract more data such as demographic information of customers. In addition, we need help on designing a strategy for this.
